SCALA FOR D.S PRACTICAL 29

Roll No. : F051	Name: RAHUL YADAV
Class : SYIT	Batch : 1
Date of Assignment : 22/09/2026	Date/Time of Submission : 22/09/2026

PRACTICAL 29

Question:

Create a simple Spark MLlib pipeline to classify data. Use logistic regression or decision trees.

CODE:

```

import org.apache.spark.sql.SparkSession
import org.apache.spark.ml.feature.VectorAssembler
import org.apache.spark.ml.classification.LogisticRegression

object scala1 extends App {

    val spark = SparkSession.builder()
        .appName("Classification")
        .master("local[*]")
        .getOrCreate()

    import spark.implicits._

    val data = Seq(
        (1.0, 0.0),
        (2.0, 0.0),
        (3.0, 0.0),
        (7.0, 1.0),
        (8.0, 1.0),
        (9.0, 1.0)
    ).toDF("marks", "label")

```

```

    val a = new VectorAssembler()
        .setInputCols(Array("marks"))
        .setOutputCol("features")

    val d = a.transform(data)

    val model = new LogisticRegression()
        .setLabelCol("label")
        .setFeaturesCol("features")

    val result = model.fit(d)

    val prediction = result.transform(d)

    prediction.select("marks", "label", "prediction").show()

    spark.stop()
}

```

OUTPUT:

+-----+-----+-----+-----+			
marks label prediction			
+-----+-----+-----+-----+			
1.0	0.0	0.0	
2.0	0.0	0.0	
3.0	0.0	0.0	
7.0	1.0	1.0	
8.0	1.0	1.0	
9.0	1.0	1.0	
+-----+-----+-----+-----+
